Art Unit: 2856

1. The amendment filed Sept. 30, 2003 has been entered.
2. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on Sept. 30, 2003 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

3. Claim 13 is rejected under 35 U.S.C. 102(b) as being anticipated by Frankel et al.

Note Figs. 1-4 and 8-10 and col. 9, line 46 - col. 10, line 10. Frankel et al as noted in the title discloses a gap adjusting apparatus. It has elements that can be interpreted as claimed. First holder, column 36, holds a first object X-Ray mask 38, having a first measurement surface making use of the plane of sensor 76. (Alternatively bracket 78 holding sensor 76 could be considered the holder of a first object). 2nd holder, stage 48, holds 2nd object, substage 50, having an upper surface that defines the second measurement surface. 1st displacement gauge, sensor 74, measures the distance to the plane of sensor 76. See col. 7, lines 53-55. Target, wafer 40, is fixed relative to sensor 74 and has a measurement surface, upper surface of the wafer, oriented in the same direction as the upper surface of substage 50. 2nd displacement gauge, sensor 76, measures the distance to target 40 as noted in col. 8, lines 11-17, and as implied against other solid surfaces such as upper surface of substrate 50. Inherently, and as claimed, it could be used "for" measuring such a distance.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2856

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Frankel et al.

As noted in Applicant's arguments sensor 76 is not disclosed as being a capacitive sensor, but in view of the teaching of the use of such sensors as useful in measuring distances in such a system it would have been an obvious expedient to have used such a sensor in Frankel et al to take advantage of the known utilities of such sensors. Clearly Frankel et al shows that either type of sensor would work in his system.

6. Claims 14 and 16-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. Applicant's arguments filed Sept. 23, 2003 have been fully considered but they are not persuasive. However upon further analysis in response to Applicants arguments it was found that the use of Frankel et al in meeting the limitations of claim 13 would be inconsistent with the meeting of the limitations of claim 14.

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Art Unit: 2856

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
